how to install softwares in Mac using linx terminal
✎

Ⓢ   **ChatGPT**
To install software on a Mac using the command line, you typically use a package manager such as Homebrew. Here's how you can do it:

1. **Install Homebrew**: If you haven't installed Homebrew already, you can do so by running the following command in your Terminal:

   bash   🗗 Copy code

   ```bash
   /bin/bash -c "$(curl -fsSL https://raw.git
   ```

2. **Update Homebrew**: Once Homebrew is installed, it's a good idea to update it to ensure you have the latest package lists and formulae. Run:

   bash   🗗 Copy code

   ```bash
   brew update
   ```

3. **Install Software**: Now you can install software using Homebrew. For example, if you want to install the `wget` command-line utility, you can do so with:

   bash   ↓   🗗 Copy code
